

VARDIO · OPERATIONAL SYSTEM

One place for how the company works

For the people who own how the company
works — from processes to proof

The management system exists. Its parts stand alone.

The management system is in place, and the procedures are often good. The problem is that they stand alone — no owner, no review date, no place in the map. Cases, risks and requirements live in separate systems, and evidence has to be hunted for when someone asks.

The procedure is approved — and not what people do.

A new revision goes out by e-mail. Nobody can show who read it.

A finding is closed in one system; the procedure it concerns lives in another.

A new requirement lands on a document, not on the process it governs.

WHAT VARDIO SHOULD DELIVER

One structure the company owns

Value chains, processes and workflows — defined the way the company works.

What applies, visible to the right role

Readers see the effective revision for their role and location — and only that.

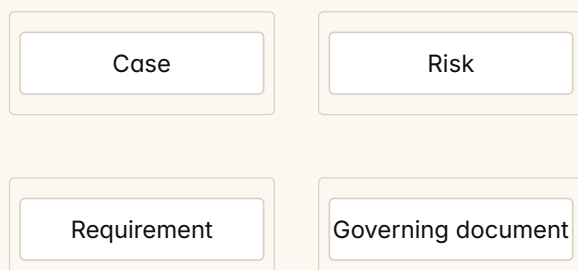

Cases, risks and requirements in place

Each attached to the process it belongs to, under one identity.

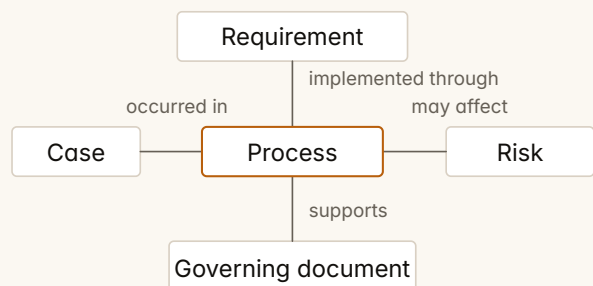

Evidence that exists where it should

Approval, acknowledgement and review recorded on named people, with full history.

SEPARATE SYSTEMS

ATTACHED TO THE PROCESS

From documents that describe the work to a system that holds it.

A family of operational systems on one protected Core.

ONE CORE, MODULES ON TOP

PART		WHAT IT HOLDS
Core	 The Core	Identity and permissions through your Entra ID · stable IDs and typed relations · workflow and form state · configuration as versioned data · audit and history · APIs and export.
Module 1	 Processes & Controlled Documents	Process register and hierarchy, governing documents and revisions, approval, acknowledgement, periodic review and the published surface.
Module 2	 QHSE Cases & Actions	Nonconformities, observations, incidents and improvements as cases — investigated, followed up and linked to the process where they occurred.
Module 3	 Risk, Barriers & Change	Risk register with dated evaluations, hazards and barriers, assessments and management of change — linked to processes and documents.
Module 4	 Compliance & Assurance	Requirement register, evidence, inspections and audits, and the basis for regulatory reporting.
Shared	 Task & Action management	One personal work queue for tasks, approvals and follow-up across the modules in use.

WHAT SETS VARDIO APART

1 Your structure, not a prescribed model

The company defines its own value chains, processes and workflows. Vardio holds the frame.

2 One identity across modules

A risk points at its process, a finding at its procedure, a change at the documents and roles it affects.

3 Content stays where you keep it

Files stay in Microsoft 365. Vardio governs identity, revision, lifecycle and audit — and pins the effective revision.

4 Configuration, not code

Fields, forms, states and rules are versioned configuration, preserved through supported upgrades.

5 Syntropio beside, not inside

It works with the person's own permissions, drafts and proposes — and never approves.

IN PRACTICE — THREE PEOPLE, ONE SYSTEM

The reader

on a shared device, sees only what is effective for her role and location, and acknowledges that exact revision under her own identity.

The process owner

drafts from the effective revision, compares it with what applies today and sends it for approval. Nothing is e-mailed.

The quality lead

sees a finding become a proposal, a decision and a new revision, with the chain from case to acknowledgement intact.

Syntropio beside the work. People decide.

ASK ANYTHING

In plain language. Answers come from effective content the person may read — with the source.

ITS OWN LANE IN WORKFLOWS

Defined tasks: find similar cases, suggest a classification, draft actions, compile learning. Each ends with a person who decides.

CONTINUOUS WATCH

Against the requirements mapped to a process, and against how the work actually flows — turned into proposals the owner accepts, changes or dismisses.

PEOPLE DECIDE

Syntropio never approves, publishes or sets an effective date. Vardio works fully without it.

PROFESSIONAL FOUNDATION

Process-oriented management systems · controlled documents and revision governance · case handling and learning from incidents · risk assessment, barrier management and bow-tie practice · management of change · audit and assurance

STANDARDS & REGULATORY LANDSCAPE

ISO 9001 · ISO 14001 · ISO 45001 · ISO 31000 · Norwegian HSE regulations · Internal Control Regulation · sector regulations where applicable

A curated selection. Standards apply at your organization's adoption level. Regulatory references reflect the Norwegian baseline — adapted per market and sector, and verified against current sources in every engagement.

WORK WITH VARDIO ON —

Four examples in ascending ambition — from a question in the meeting to a governed rhythm across the organization.

ASK	"Which revision of the lifting procedure applies on this unit today, and who owns it?"
PRODUCE	"Draft the new revision from the three cases that point at step 4 — for the owner to decide."
SCHEDULE	"Run the periodic review of every governing document in the area, with reminders and escalation."
CONSOLIDATE	"Collect improvement proposals and audit findings across units into decidable actions on the process."

Vardio is a family of operational systems supplied by Omnio AS: one installation in your own Microsoft and Azure environment, updated through signed product packages, with full export and stable IDs.

BRING ONE PROCESS AREA

Bring one process area and its documents. We'll show how they become a structure you own, with Syntropio beside the people who run it.
